Changing the Future:

New Trends in Multiple Sclerosis Research and Treatment

The pace of developments in multiple sclerosis research and treatment has brought breakthroughs we could only dream of just a few years ago. But what is known, and what is still unknown, is an important distinction that merits a closer look.

Join us on Sunday, October 24 for the 2nd annual Multiple Sclerosis Symposium, presented by the Corinne Goldsmith Dickinson Center for MS, The Mount Sinai Medical Center, New York.

This free, day-long event, held in the stunning Grand Hyatt New York hotel, is a unique opportunity to hear leading scientists and physicians explain the latest findings in MS therapeutics and patient care. In a special lunchtime session, meet Zoe Koplowitz, author of *The Winning Spirit: Life Lessons Learned In Last Place*, as she prepares for her 24th marathon — a test of perseverance and courage.

Be a part of this important update from the nation's leading clinical and research experts in MS. Make your reservation today.

Registration:

Sign up today for this free day-long event! Seating is limited. Friends and family are welcome.

Call to register: 1-212-463-7787, option 1

Be advised, by calling this number to register for this program, you are giving your name and information to the National MS Society and you may be receiving future information from them unless you request otherwise.
