Gynecologic Oncology trials available at Mount Sinai Hospital

Listed here are clinical trials currently available to patients at Mount Sinai Hospital. Ask your doctor for more information about participating in one of these trials.

Endometrial (uterine) cancer:

GOG 0249: A phase 3 trial of pelvic radiation therapy versus vaginal cuff brachytherapy followed by paclitaxel / carboplatin chemotherapy in patients with high risk, early stage endometrial carcinoma.

GOG-0250: A randomized phase 3 evaluation of docetaxel and gemcitabine plus G-CSF with bevacizumab versus docetaxel and gemcitabine plus G-CSF with placebo in treatment of recurrent or advanced leiomyosarcoma of the uterus.

GOG-0258: A randomized phase 3 trial of cisplatin and tumor volume directed irradiation followed by carboplatin and paclitaxel versus carboplatin and paclitaxel for optimally debulked, advanced endometrial carcinoma.

Cervical or Endometrial Cancer:

GOG-0233/ACRIN 6671: Utility of preoperative FDG-PET/CT and Feru-moxtran-10 MRI scanning prior to primary chemo-radiation therapy to detect retroperitoneal lymph node metastasis in advanced cervical or endometrial cancer.

Ovarian or Endometrial Cancer:

GOG-0261: A randomized phase 3 trial of paclitaxel plus carboplatin versus ifosfamide plus paclitaxel in chemotherapy-naïve patients with newly diagnosed stage I-IV, persistent or recurrent carcinosarcoma (mixed mesodermal tumors) of the uterus or ovary.

Ovarian, Peritoneal or Fallopian Tube Cancer:

GOG-0213: A phase 3 randomized controlled clinical trial of carboplatin and paclitaxel alone or in combination with bevacizumab followed by bevacizumab and secondary cytoreductive surgery in platinum-sensitive, recurrent ovarian, peritoneal and fallopian tube cancer.

These studies are carried out under the sponsorship of the Gynecologic Oncology Group (GOG), an organization dedicated to clinical research in the field of gynecologic cancer. The GOG is funded by the Federal Government through the National Cancer Institute (NCI).

NOTE: Recruitment status for trials may change or new trials may become available.
